

Learning Objectives

After completing this lab, you will be able to:

- Explain the Business Analysis Matrix, including its structure and purpose to evaluate and prioritize business opportunities
- Analyze and categorize business opportunities based on impact and feasibility
- Create a Business Analysis Matrix in a spreadsheet (eg. MS Excel) to document and prioritize business requirements

Introduction

Welcome to the lab creating a business analysis matrix.

In this lab, you will explore the business analysis matrix, focusing on its four quadrants and grid structure. You will analyze potential opportunities in a hospital setting and categorize them into one of four quadrants: high impact/high feasibility, high impact/low feasibility, low impact/high feasibility, and low impact/low feasibility.

You will be tasked with creating a business analysis matrix for the listed opportunities using a spreadsheet. You can choose from various spreadsheet applications, such as **Excel** for **Windows**, **LibreOffice Calc** for **Linux**, or **Apple Numbers** for **macOS**. Alternatively, you may opt for **Google Sheets**, a web-based tool that requires setting up a Google account.

In this lab, you will specifically work with **Microsoft Excel** to create the business analysis matrix. Once you complete the guided exercises, you are encouraged to practice independently by creating the matrix in other spreadsheet applications.

Scenario

Imagine a hospital in the healthcare industry that is aiming to improve its operational efficiency, enhance patient satisfaction, and make strategic investments for long-term growth. As part of its expansion and development plans, the hospital leadership is evaluating a range of opportunities to optimize its services, implement new technologies, and broaden its reach. These opportunities include both operational improvements and strategic investments, each with varying levels of potential impact and feasibility.

The hospital is considering the following opportunities:

1. Implementing an electronic health record (EHR) system

2. Improving patient waiting room comfort
3. Installing solar panels for sustainable energy
4. Developing a medical research facility
5. International expansion for medical tourism
6. Developing a new niche service (e.g., alternative medicine)
7. Launching telemedicine services
8. Automating patient appointment scheduling
9. Expanding into specialized care (e.g., cancer treatment center)
10. Offering healthy food options in the hospital cafeteria
11. Upgrading the hospital website for a better user experience
12. Building a luxury VIP patient wing

As the business analyst, your goal is to categorize and prioritize these opportunities, providing a clear path forward for the hospital's strategic planning.

1. Review the Business Analysis Matrix

The Business Analysis Matrix is a strategic tool for evaluating and prioritizing business opportunities and challenges. The matrix categorizes opportunities into four quadrants based on two critical factors: impact (how much the opportunity can affect the business) and feasibility (how easily it can be implemented). This method allows businesses to make informed decisions that align with their goals and resources.

The four quadrants of the Business Analysis Matrix are:

1. **High Impact, High Feasibility:** These opportunities or challenges are both highly impactful and relatively easy to implement, making them prime targets for immediate action.
2. **High Impact, Low Feasibility:** These opportunities or challenges offer significant potential impact but are difficult to implement, requiring careful consideration and planning.
3. **Low Impact, High Feasibility:** These opportunities or challenges are easy to implement but have a smaller impact on the organization, often providing quick benefits.
4. **Low Impact, Low Feasibility:** These opportunities or challenges are neither impactful nor feasible, typically suggesting a need for further evaluation or potential exclusion from consideration.

The following grid represents the Business Analysis Matrix, which can be used to categorize and evaluate business opportunities based on their impact and feasibility.

	Impact	
Feasibility	High	Low
High		
Low		

2. Analyze and categorize business opportunities

1. Implementing an electronic health record (EHR) system

- **Description:** Streamlines patient data management and improves operational efficiency by digitalizing patient records, reducing errors, and speeding up information sharing across departments.
- **Impact:** High. The EHR system would improve operational efficiency, reduce errors, and enhance patient care.
- **Feasibility:** High. The implementation involves a high initial investment but offers long-term benefits.

2. Improving patient waiting room comfort

- **Description:** Enhances the patient's experience with minimal costs by improving seating arrangements, adding reading material, or offering refreshments.
- **Impact:** Low. While it improves the patient's experience, the impact on overall hospital operations is minimal.
- **Feasibility:** High. Easy to implement with minimal investment and low complexity.

3. Installing solar panels for sustainable energy

- **Description:** Invest in solar energy to reduce the hospital's long-term energy costs and its carbon footprint.
- **Impact:** Low. Long-term cost savings and environmental benefits, but minimal short-term operational impact.
- **Feasibility:** Low. High initial investment and potential challenges with permits and infrastructure adjustments.

4. Developing a medical research facility

- **Description:** Build a facility dedicated to medical research, attracting funding, and improving the hospital's reputation as a leader in healthcare innovation.
- **Impact:** High. This would boost prestige, attract funding, and increase collaborations.
- **Feasibility:** Low. Requires large upfront investments and significant time to realize returns, along with regulatory compliance.

5. International expansion for medical tourism

- **Description:** Attract international patients by offering specialized services and treatments, helping the hospital gain global recognition and boost revenue.
- **Impact:** High. Could significantly increase revenue and reputation.
- **Feasibility:** Low. Requires extensive marketing, legal compliance, and logistical arrangements.

6. Developing a new niche service (e.g., alternative medicine)

- **Description:** Offer alternative or complementary healthcare services such as acupuncture or homeopathy to cater to a growing segment of patients.
- **Impact:** Low. The service may not attract a broad audience and requires specialized staff.
- **Feasibility:** Low. Requires certification and recruitment of specialized professionals but is less complex to implement than larger projects.

7. Launching telemedicine services

- **Description:** Enable remote consultations through digital platforms, providing care to patients who cannot visit the hospital physically.
- **Impact:** High. Expand reach and improve accessibility for patients.
- **Feasibility:** High. Technologically feasible and relatively straightforward to implement using existing infrastructure.

8. Automating patient appointment scheduling

- **Description:** Implement a system to automatically schedule and manage patient appointments, reducing human error and increasing efficiency.
- **Impact:** High. Improves efficiency in scheduling and enhances patient satisfaction.
- **Feasibility:** High. The technology is readily available, and implementation is straightforward.

9. Expanding into specialized care (e.g., cancer treatment center)

- **Description:** Invest in specialized care, such as oncology, which requires significant investment in staff and equipment but could greatly enhance reputation.
- **Impact:** High. This would increase the hospital's specialization and reputation.
- **Feasibility:** Low. High capital investment and the need for specialized staff and technology.

10. Offering healthy food options in the hospital cafeteria

- **Description:** Provide healthy meals to promote a better environment for patients and staff.
- **Impact:** Low. While this supports a healthier environment, it does not significantly impact core operations.
- **Feasibility:** High. Easy to implement with minimal cost.

11. Upgrading the hospital website for a better user experience

- **Description:** Redesign the hospital's website to improve navigation, accessibility, and patient experience with features like appointment booking and health tips.
- **Impact:** Low. While enhancing patient satisfaction, it has minimal impact on broader hospital operations.
- **Feasibility:** High. Simple and cost-effective to implement.

12. Building a luxury VIP patient wing

- **Description:** Create an exclusive wing with high-end amenities for affluent patients willing to pay a premium for luxury healthcare services.
- **Impact:** Low. This would attract a niche audience and generate revenue but has limited broad impact.
- **Feasibility:** Low. Requires significant upfront investment and caters to a small audience.

The following grid displays the Business Analysis Matrix designed to evaluate various opportunities within a hospital setting. This matrix helps categorize each option based on its potential impact on operations and the feasibility of implementation.

	Impact	
Feasibility	High	Low
High	Implementing an electronic health record (EHR) system	Improving patient waiting room comfort

	Impact	
Launching telemedicine services	Offering healthy food options in the hospital cafeteria	
Automating patient appointment scheduling	Upgrading the hospital website for a better user experience	
Low	Expanding into specialized care (e.g., cancer treatment center)	Developing a new niche service (e.g., alternative medicine)
Developing a medical research facility	Building a luxury VIP patient wing	
Building a luxury VIP patient wing	Installing solar panels for sustainable energy	

3. Exercise: Create a business analysis matrix in Microsoft Excel

The following steps will guide you through setting up and populating the matrix in Excel, ensuring that you can effectively assess potential opportunities for the hospital.

Step 1: Set up your Excel sheet

1. Open Microsoft Excel and select the **Blank workbook** option

2. Save and rename this document with an appropriate name, such as the **Business analysis matrix.xlsx**

Step 2: Create a grid

1. Define your matrix axes.

- In Cell A2, write **Feasibility**
- In Cell B1, write **Impact**
- In Cell B2, write **High** and in Cell A3, write **High**
- In Cell C2, write **Low** and in Cell A6, write **Low**

2. Merge cells A3, A4 and A5 and align the text to the center

3. Merge cells A6, A7 and A8 and align the text to the center

4. Merge cells B1 and C1 and align the text to the center.

Step 3: Format the grid

1. Select the labels **High** and **Low** in the cells B2 and C2 and click **Center** under **Home** tab to align them at the center.

3. Select each group of cells, click on **Fill Color** under **Home** tab and choose below colors for the four quadrants.

- B3, B4, B5 (High Impact, High Feasibility): Green
- C3, C4, C5 (High Impact, Low Feasibility): Yellow
- B6, B7, B8 (Low Impact, High Feasibility): Blue
- C6, C7, C8 (Low Impact, Low Feasibility): Red

4. Click on the drop-down **Border** under the **Home** tab, and select **All Borders**.

Step 4: Assign business requirements

Populate the Business Analysis Matrix with the following business requirements adjusting the width of the cells.

- Under **High Impact, High Feasibility (B3, B4, B5)**, write:
 - Implementing an electronic health record (EHR) system
 - Launching telemedicine services
 - Automating patient appointment scheduling
- Under **High Impact, Low Feasibility (B6, B7, B8)**, write:
 - Expanding into specialized care (e.g., cancer treatment center)
 - Developing a medical research facility
 - International expansion for medical tourism
- Under **Low Impact, High Feasibility (C3, C4, C5)**, write:
 - Improving patient waiting room comfort
 - Offering healthy food options in the hospital cafeteria
 - Upgrading the hospital website for a better user experience
- Under **Low Impact, Low Feasibility (C6, C7, C8)**, write:

- Developing a new niche service (e.g., alternative medicine)
- Building a luxury VIP patient wing
- Installing solar panels for sustainable energy

	A	B	C	D	E
1		Impact			
2	Feasibility	High	Low		
3	High	Implementing an electronic health record (EHR) system	Improving patient waiting room comfort		
4		Launching telemedicine services	Offering healthy food options in the hospital cafeteria		
5		Launching telemedicine services	Upgrading the hospital website for a better user experience		
6	Low	Expanding into specialized care (e.g., cancer treatment center)	Developing a new niche service (e.g., alternative medicine)		
7		Developing a medical research facility	Building a luxury VIP patient wing		
8		Developing a medical research facility	Installing solar panels for sustainable energy		

Step 5: Export the business analysis matrix (Optional)

1. Select **File** tab, Click **Export** and then Click on **Create PDF/XPS**

2. Choose **PDF** under the drop down **Save as Type** and click on **Publish**.

The final output would be similar to as shown below:

	Impact	
Feasibility	High	Low
High	Implementing an electronic health record (EHR) system	Improving patient waiting room comfort
	Launching telemedicine services	Offering healthy food options in the hospital cafeteria
	Launching telemedicine services	Upgrading the hospital website for a better user experience
Low	Expanding into specialized care (e.g., cancer treatment center)	Developing a new niche service (e.g., alternative medicine)
	Developing a medical research facility	Building a luxury VIP patient wing
	Developing a medical research facility	Installing solar panels for sustainable energy

Summary

In this lab, you have learned to create the Business Analysis Matrix to evaluate opportunities using a scenario for a hospital setting. First, you analyzed and categorized business opportunities based on their impact and feasibility. Next, you created a Business Analysis Matrix in Excel, organizing the opportunities into four quadrants. Finally, you populated the matrix with specific business requirements, enabling informed decision-making for potential operational improvements and strategic investments.
