

Learning Objectives

After completing this lab, you will be able to:

- Define the purpose and key components of a business requirements document (BRD) for capturing project goals and requirements
- Identify digital tools that can be commonly used in business analysis for documenting requirements
- Create sample business requirement documents (BRD) using a text editor (eg. Microsoft Word), Jira, and Confluence

Introduction

Welcome to the lab using tools for documenting requirements.

In this lab, you will explore digital tools to document and manage requirements for a given business analysis scenario. These tools are essential for capturing, organizing, and communicating requirements effectively. The lab will help you create sample business requirements document demonstrating how digital tools can be effectively used to manage different types of business requirements. By the end of the lab, you will gain hands-on experience with these tools, allowing you to select the most appropriate method for documenting and managing requirements in various scenarios.

Scenario

A retail shop is undergoing digital transformation to streamline operations, enhance customer experience, and improve efficiency. The shop needs to implement several systems to support these improvements.

The retail shop is considering the following requirements:

1. **Inventory management system:** The retail shop should implement an automated inventory management system to track stock levels, automate product reordering, and send alerts when stock is low.
2. **Point of sale (POS) system:** The shop must have a modern POS system that processes sales transactions, integrates with inventory, supports multiple payment methods (cash, credit, mobile payments), and generates sales reports.
3. **Customer loyalty program:** Develop a loyalty program that rewards customers for repeat purchases, integrates with the POS system, and offers tailored promotions and discounts based on purchase history.

4. **Online store integration:** Implement an e-commerce platform that seamlessly integrates with the physical store's inventory, allowing customers to check product availability and place orders online for delivery or in-store pickup.
5. **Sales analytics:** The shop must implement a sales analytics tool to track key performance indicators (KPIs) such as daily revenue, average transaction value, and customer footfall, enabling data-driven decision-making.
6. **Employee management system:** Create an employee management system for scheduling, tracking work hours, and managing payroll. The system should also offer performance tracking and task management features.
7. **Customer support platform:** Develop a customer support system, including a help desk for handling customer queries and complaints, both in-store and online, with integration for tracking issues and resolution status.
8. **Product categorization and search:** The shop should implement a product categorization system with an easy-to-use search function that helps customers quickly find products by category, brand, price, or popularity.
9. **Security and surveillance:** Install a comprehensive security system with surveillance cameras, alarm systems, and integration with the POS system for monitoring suspicious transactions or behavior in real time.
10. **Promotions and discounts management:** Develop a system to easily create and manage promotional campaigns, track coupon usage, and apply discounts during checkout, both online and in-store.

You have been tasked with documenting these requirements using a variety of tools. You can choose from several text editors, such as **Notepad**, **WordPad**, or **Word** for Windows, and **TextEdit** for macOS. Alternatively, you may use **Google Docs** by setting up a Google account.

In this lab, you will specifically use **Microsoft Word** along with other popular tools like **Jira** and **Confluence** to create sample Business Requirements Documents (BRDs) for one or two requirements. Once you complete the guided exercises, you can practice independently by entering the remaining requirements using these tools.

Review the purpose and components of BRD

A business requirements document (BRD) is a formal document used to outline the business needs and project objectives that a particular solution or system must meet. It acts as a blueprint for a project and serves as a contract between the business stakeholders and the project team. The purpose of a BRD is to ensure that all stakeholders have a clear understanding of the business goals, scope, and expected outcomes of the project before the

development phase begins. This document helps facilitate effective communication and alignment among all parties involved, ensuring that the project meets its intended objectives and delivers value to the organization.

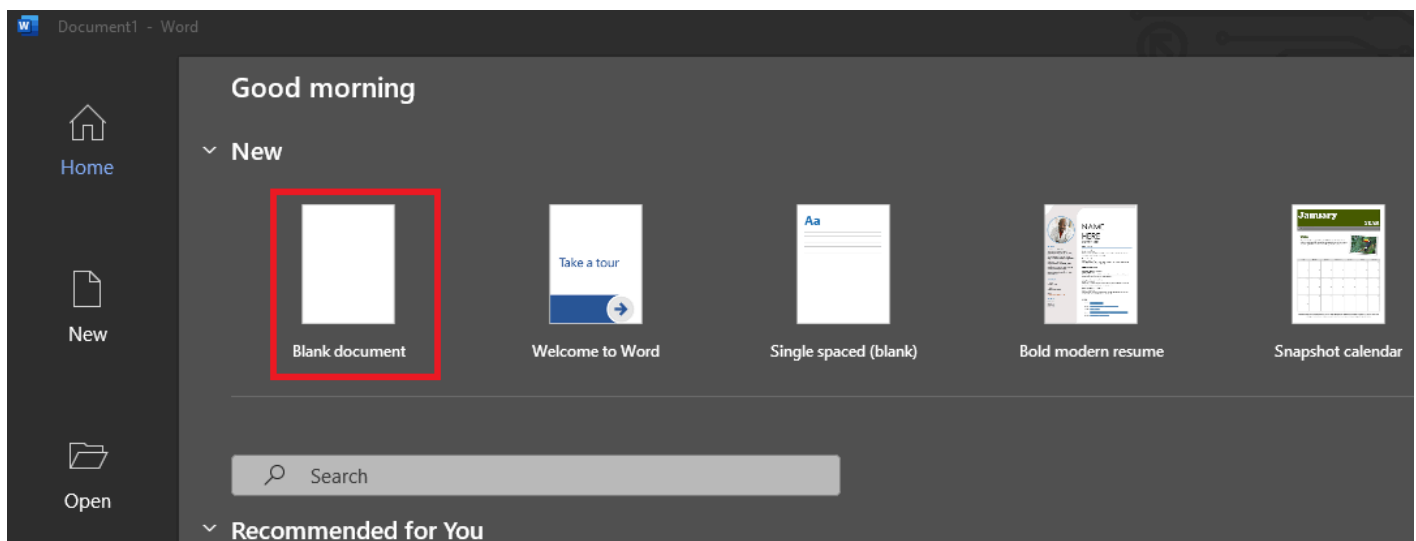

Exercise 1: Create a BRD using Microsoft Word

Microsoft Word is one of the most widely used word processing tools in business environments, offering a versatile platform for creating documents ranging from simple memos to complex reports. Its user-friendly interface, rich formatting options, and compatibility with various file formats make it a preferred choice for documenting business requirements.

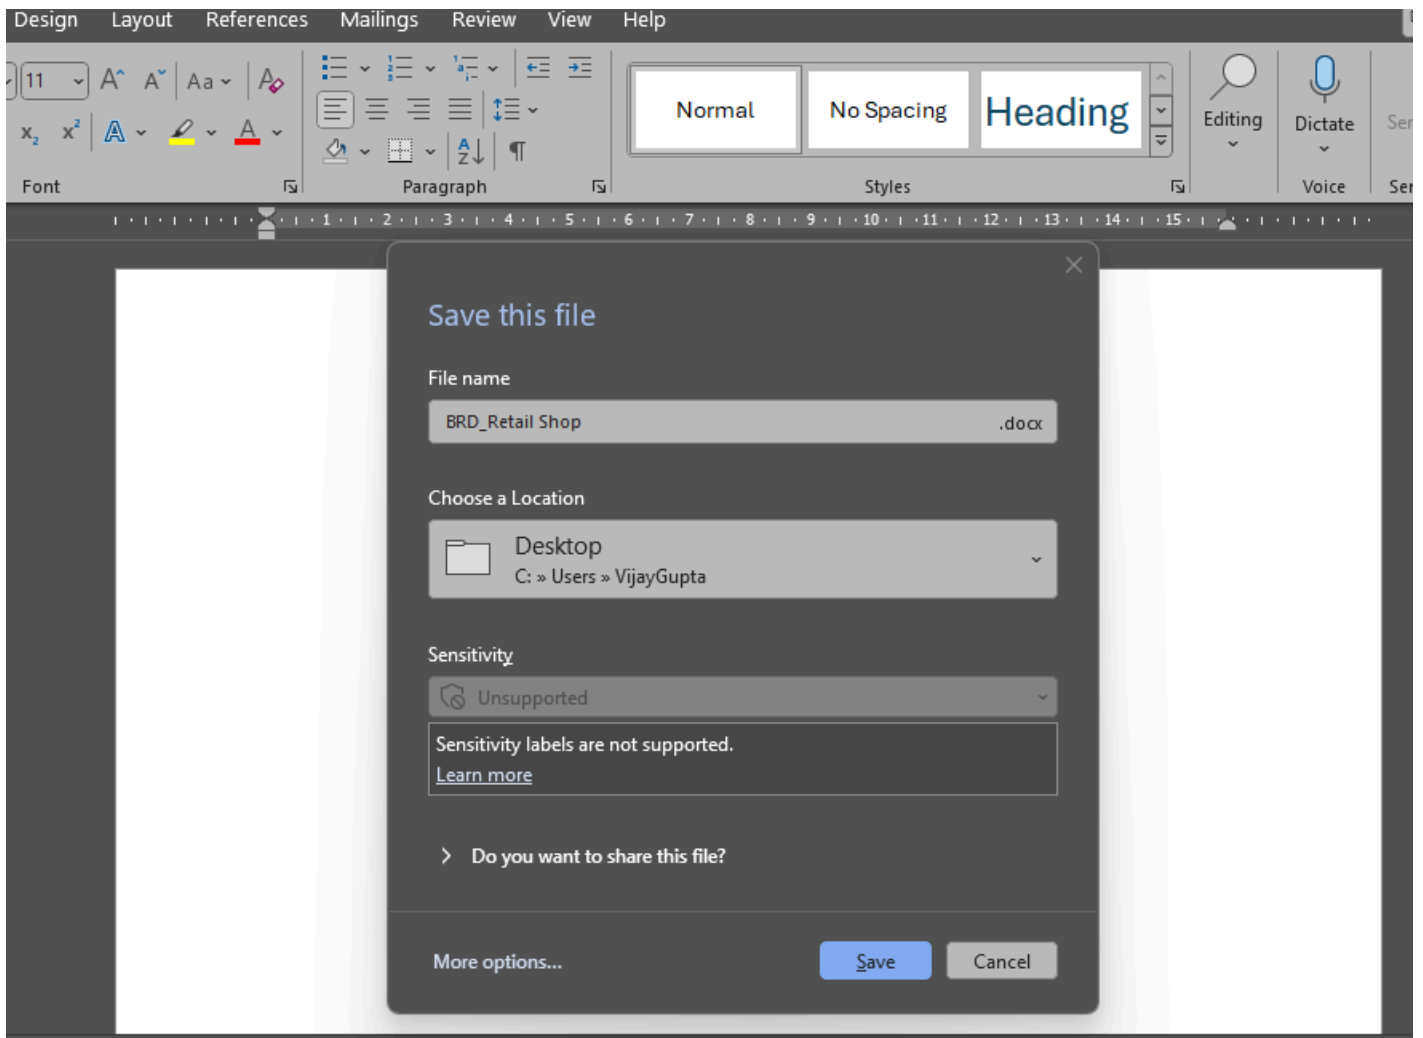

To create a sample business requirements document (BRD) in Microsoft Word, follow these steps.

Step 1: Create a new document

1. Open Microsoft Word and Select the **Blank document** option.

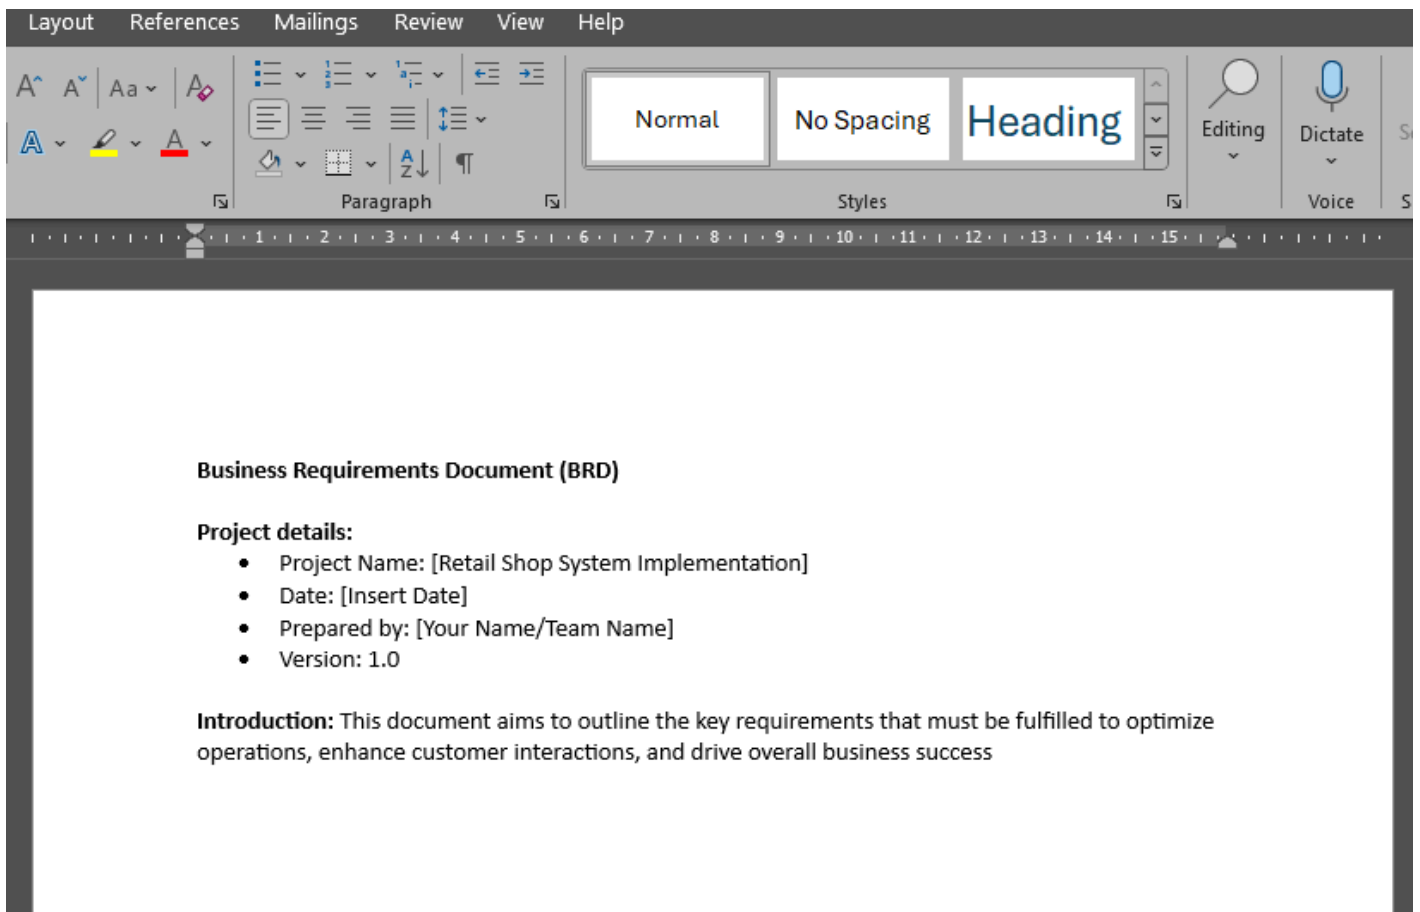

2. Save and rename this document with an appropriate name, such as a **BRD_Retail Shop.docx**

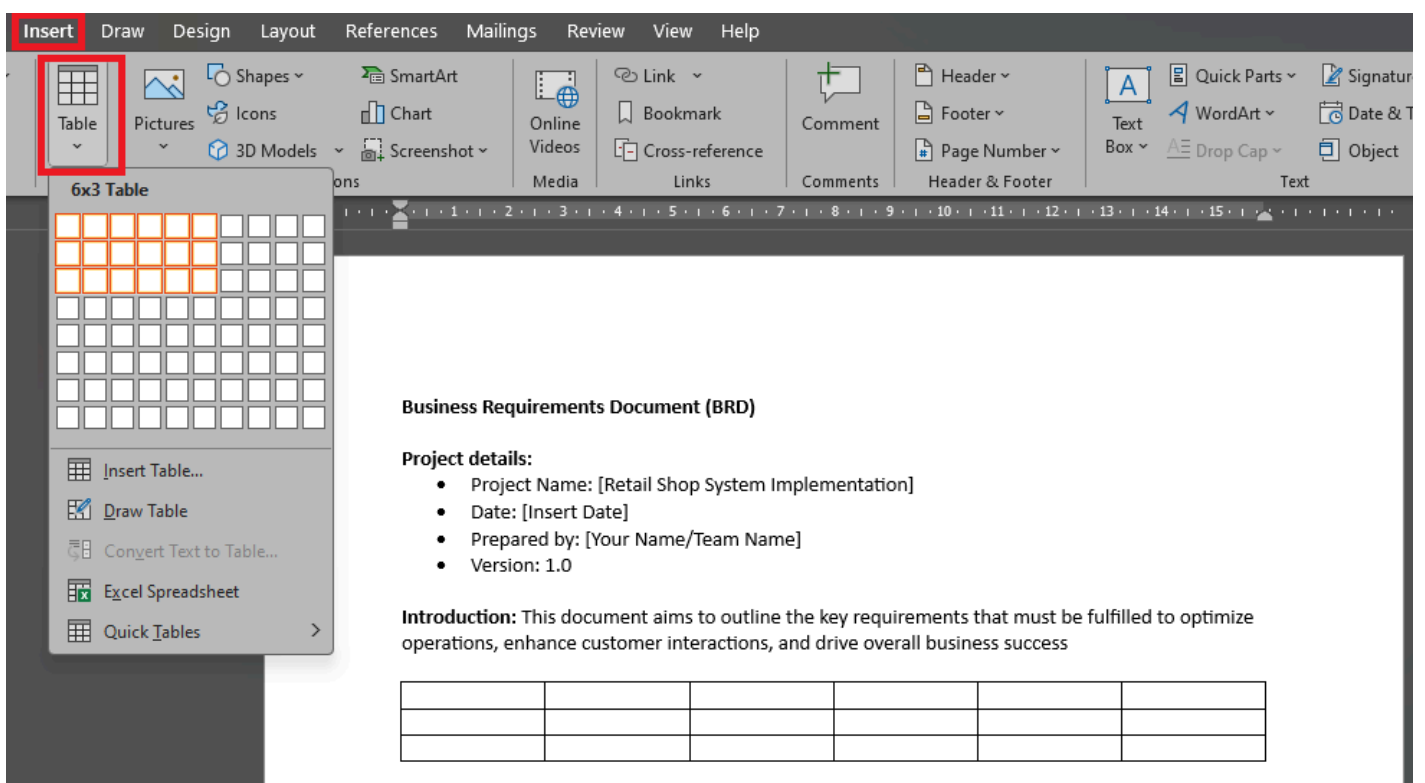

Step 2: Add title, project details, and introduction

- **Title:** Business Requirements Document (BRD)
- Project Name: [Retail Shop System Implementation]
- Date: [Insert Date]
- Prepared by: [Your Name/Team Name]
- Version: 1.0
- **Introduction:** This document aims to outline the key requirements that must be fulfilled to optimize operations, enhance customer interactions, and drive overall business success.

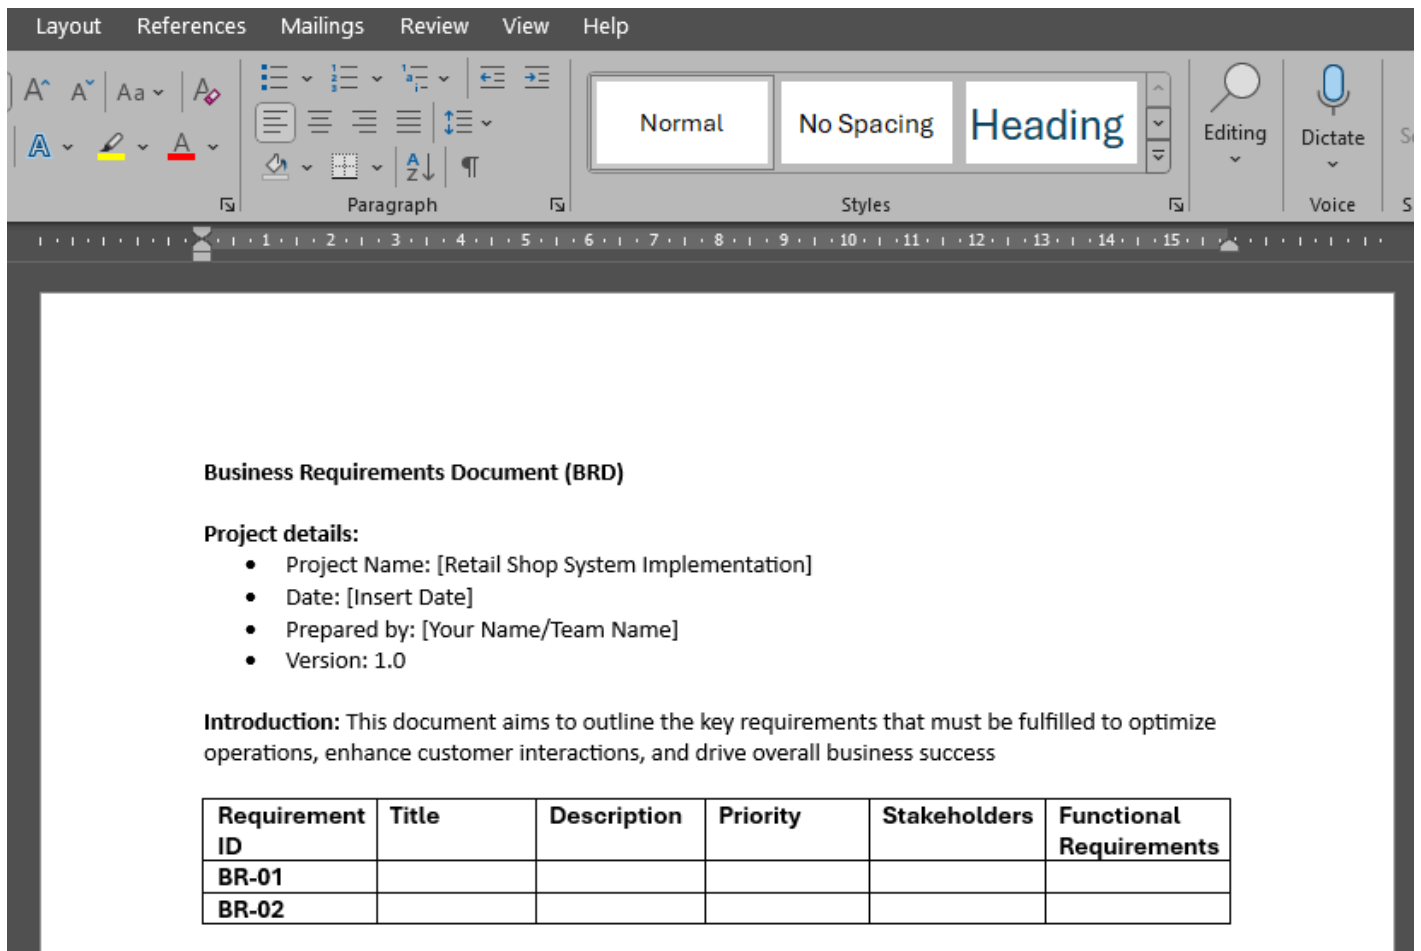

Step 3: Create the requirements table

- Go to the **Insert** tab in the Word ribbon.
- Select **Table** and choose the number of columns and rows. For instance, you need 6 columns and 3 rows for the documenting the initial two requirements, including one header row.

Step 4: Add headings for rows and columns

- In the first row of the table, add the following column headings.
 - **Requirement ID**
 - **Title**
 - **Description**
 - **Priority**
 - **Stakeholders**
 - **Functional Requirements**
- In the first column and rows 2 and 3, add the respective **requirement IDs** as **BR-01** and **BR-02**.

Business Requirements Document (BRD)

Project details:

- Project Name: [Retail Shop System Implementation]
- Date: [Insert Date]
- Prepared by: [Your Name/Team Name]
- Version: 1.0

Introduction: This document aims to outline the key requirements that must be fulfilled to optimize operations, enhance customer interactions, and drive overall business success

Requirement ID	Title	Description	Priority	Stakeholders	Functional Requirements
BR-01					
BR-02					

Step 5: Input requirement data

- Fill in below data for **row 2**:
 - **Title:** Inventory management system
 - **Description:** Implement an automated inventory management system to track stock levels

- **Priority:** High
- **Stakeholders:** Store manager, Cashier
- **Functional Requirements:** Track stock levels, automate reordering, send low stock alerts
- Fill in the below data for **row 3**:
 - **Title:** Point of sale (POS) system
 - **Description:** Implement a modern POS system to process transactions and support payments
 - **Priority:** High
 - **Stakeholders:** Store manager, Warehouse team
 - **Functional Requirements:** Support multiple payment methods, integrate with inventory

Project details:

- Project Name: [Retail Shop System Implementation]
- Date: [Insert Date]
- Prepared by: [Your Name/Team Name]
- Version: 1.0

Introduction: This document aims to outline the key requirements that must be fulfilled to optimize operations, enhance customer interactions, and drive overall business success

Requirement ID	Title	Description	Priority	Stakeholders	Functional Requirements
BR-01	Inventory management system	Implement an automated inventory management system to track stock levels	High	Store manager, Warehouse team	Track stock levels, automate reordering, send low stock alerts
BR-02	Point of sale (POS) system	Implement a modern POS system to process transactions and support payments	High	Store manager, Cashier	Support multiple payment methods, integrate with inventory

Step 7: Add additional rows for remaining requirements and input requirement IDs

1. Right click on the table, Select **Insert** and click on the option **Insert Rows Below** to add more rows for the remaining requirements.

Requirement ID	Title	Description	Priority	Stakeholder	Functional Requirements
		with physical store's inventory			display information
BR-05	Sales analytics	Implement a tool to track KPIs for sales performance	Medium	Store manager, Finance team	Track and analyze sales data
BR-06	Employee management system	Create a system for scheduling, payroll, and performance tracking	Medium	HR team, Store manager	Manage employee information
BR-07	Customer support platform	Develop a help desk system for customer queries and complaints	Medium	Customer service team, Customers	Handle customer inquiries
BR-08	Product categorization and search	Implement product categorization with an easy-to-use search system	Medium	Customers, Store manager	Facilitate product discovery

Requirement ID	Title	Description	Priority	Stakeholder	Functional Requirements
BR-09	Security and surveillance	Install a security system with surveillance and transaction monitoring	High	Security team, Store manager	Security system for monitoring transactions and surveillance
BR-10	Promotions and discounts management	Develop a system for managing promotions and discounts	Medium	Marketing team, Store manager	System for managing promotions and discounts

Exercise 2: Create a BRD using Jira

To put business requirements into Jira, you need to create tasks (referred to as **Issues** in Jira) that reflect the business requirements. Here's how to do that step by step:

Step 1: Sign up and log in to Jira

1. To start with Jira, you need to sign up to create a free account and then log in. Right-click and open the [Jira: Sign up](#) link in the new tab.

Work email

Step 2: Create a project

1. Click on drop down **Projects** in the top **Menu** bar and click **Create project**.

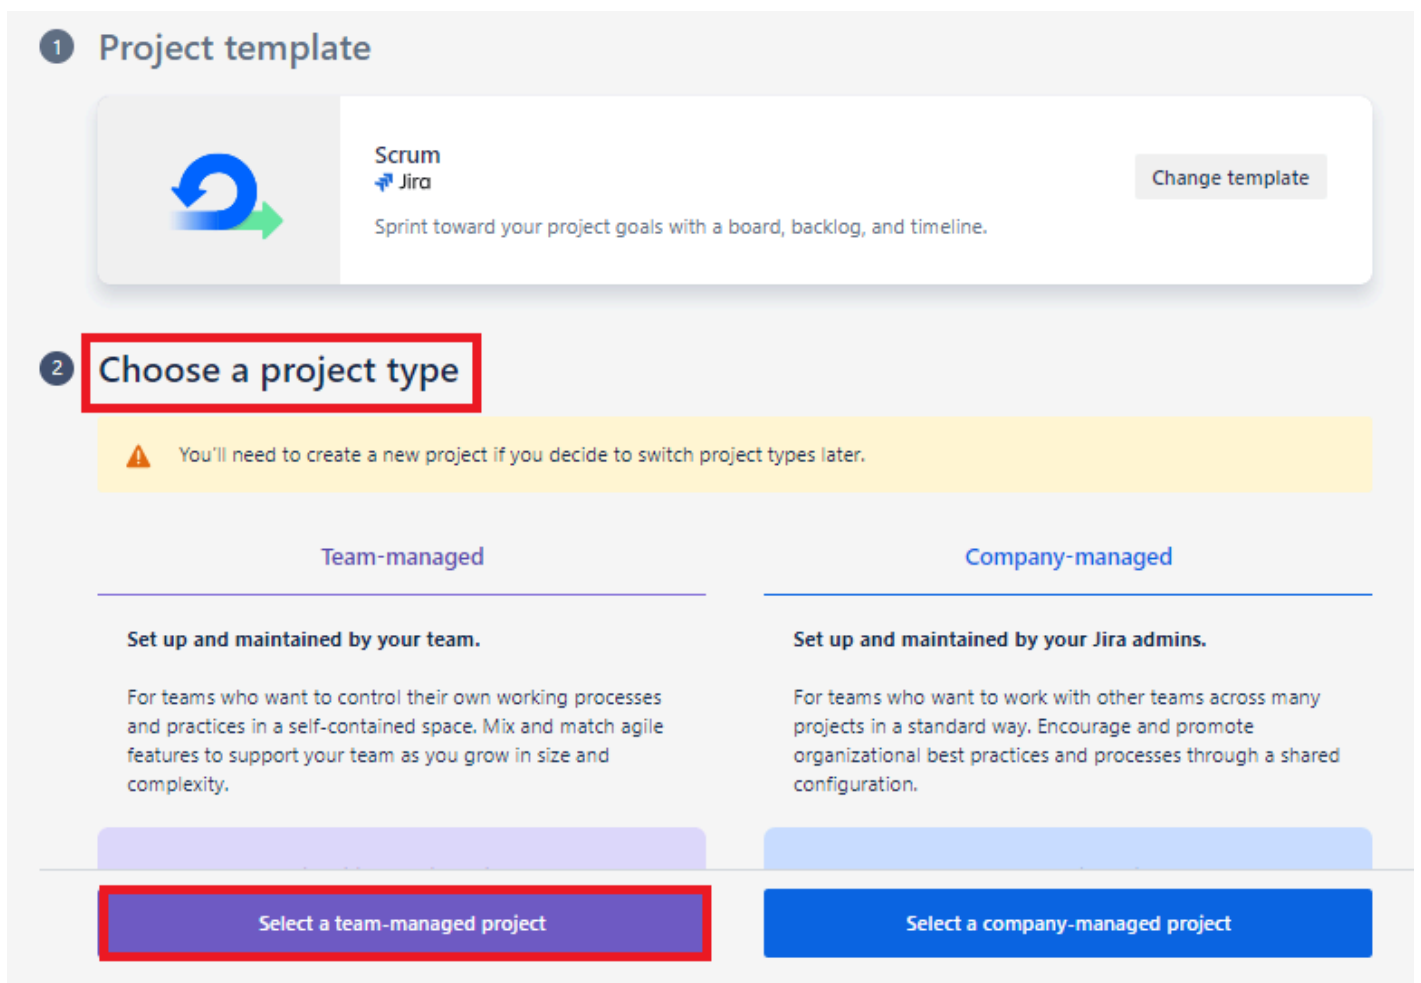

2. On the left panel, click **Jira** and select project template **Scrum**, then click **Use template**.

3. Choose a project type **Select a team-managed project.**

4. Add project details. Fill in **Retail Shop Systems Implementation** under **Name** and defined **key** as **RESSI**, click **Next** and then **Continue**. This will create the project and you will be redirected to the dashboard.

Next

Step 3: On the dashboard, click **Create** on the extreme right of the **menu** bar.

Step 4: Select issue type

- In the **Issue type** dropdown, select the type of issue that best represents your requirement. Typically, for business requirements, you can choose:

- **Epic:** If your requirement is large and can be broken down into smaller tasks.
- **Story:** If the requirement is a feature or functionality to be developed.
- **Task:** If the requirement is an action or general task to complete.

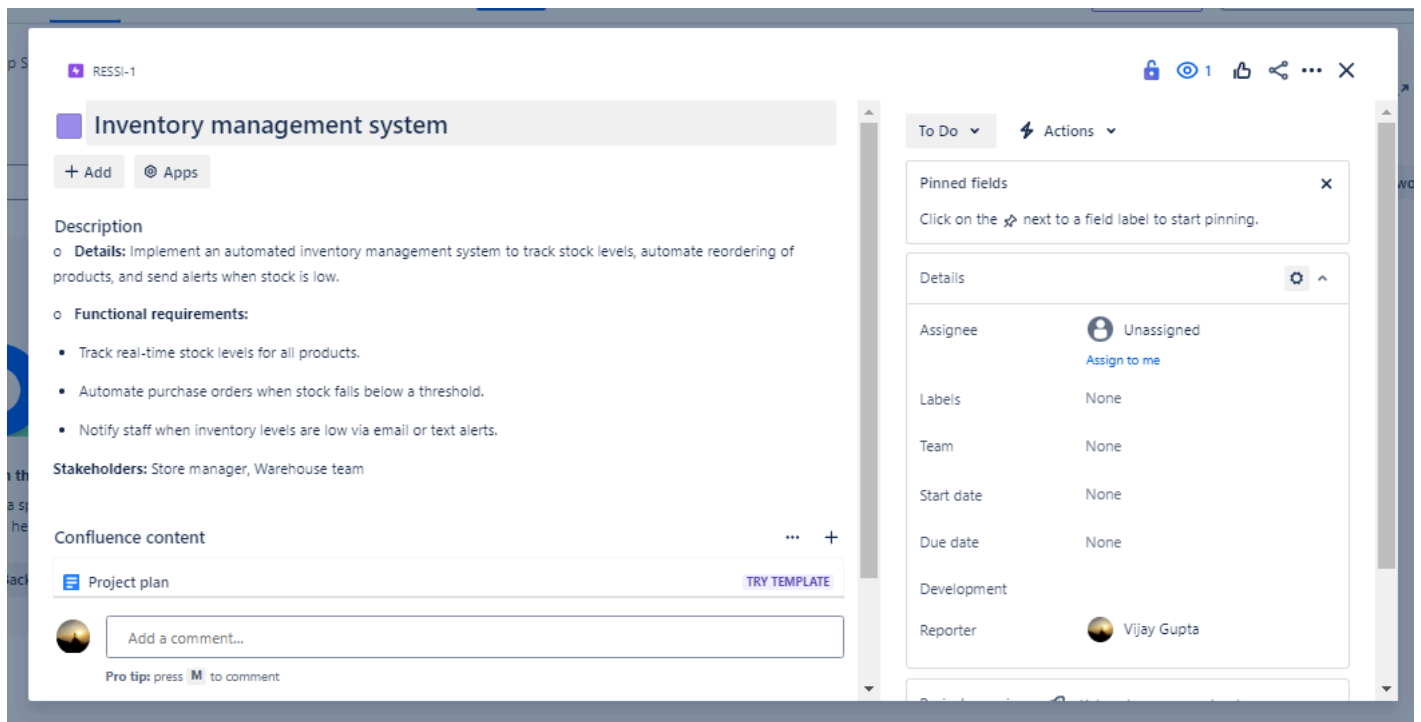

Since the requirements were extensive, an **Epic** was created.

The screenshot shows a 'Create' modal window in a project management application. The modal has a title bar with a close button. Inside, there's a note 'Required fields are marked with an asterisk *'. The 'Project' field is a dropdown menu showing 'Retail Shop Systems Implementation (RESSI)'. The 'Issue type' field is a dropdown menu with 'Epic' selected, highlighted by a red rectangle. Below it is a link 'Learn about issue types'. The 'Status' field is a dropdown menu with 'To Do' selected, with a subtext 'This is the initial status upon creation'. There is a 'Summary' text input field and a 'Description' section. At the bottom, there is a checkbox 'Create another', a 'Cancel' button, and a 'Create' button.

Step 5: Enter the requirement details In the form that appears, you need to fill out the following fields:

- **Status:** The initial status upon creation will appear as **To Do**.
- **Summary:** The title of your business requirement such as **Inventory Management System**.

The Jira issue for the first requirement is shown below.

Note: Repeat **Step 3** to **Step 6** to put other business requirements in Jira.

Exercise 3: Create a BRD using Confluence

Using Confluence to create a requirement table or business requirements document (BRD) is an efficient way to collaborate with teams and stakeholders. Confluence offers various templates and formatting tools to structure and document your requirements.

Here's a step-by-step guide to create a BRD for the initial two requirements in Confluence.

Step 1: Sign up or log in to Confluence

1. To start with Confluence, you need to sign up to create a free trial account and then log in.

Right-click and open the [Confluence: Sign up](#) link in the new tab.

Confluence

It's free for up to 10 users — no credit card needed.

Step 2: Create a new document.

1. Click the **+ Create** button in the top menu and choose **Page**.

2. Add a suitable title for the page such as **Business Requirements Document**.

Step 3: Create a requirements tableConfluence allows you to add a table to structure and organize your requirements effectively. Here's how to add a requirements table

1. Click on the drop-down **Table size** next to the table icon in the toolbar.

- **Requirement ID:** Unique identifier for the requirement (e.g., BR001).
- **Requirement:** The name or short description of the requirement.
- **Description:** A detailed explanation of the requirement.
- **Priority:** The priority of the requirement (High, Medium, Low).
- **Stakeholder:** The person or group impacted by the requirement

Business Requirements Document

Owned by Vijay Gupta Just a moment ago • 1 min read • Analytics

Requirement ID	Title	Description	Priority	Stakeholders	Functional Requirements
BR001	Inventory management system	Implement an automated inventory management system to track stock levels	High	Store manager, Warehouse team	Track stock levels, automate reordering, send low stock alerts
BR002	Point of sale (POS) system	Implement a modern POS system to process transactions and support payments	High	Store manager, Cashiers	Support multiple payment methods, integrate with inventory

Step 7: Collaborate and share

- Invite team members or stakeholders to review the business requirements document by tagging them using @mention within the document.
- Share the document link with your team for collaboration. Team members can comment directly on the document to provide feedback or ask questions.

The screenshot shows a Confluence page titled "Business Requirements Document". The page header includes navigation links: Spaces, Teams, Apps, Templates, and a + Create button. A search bar and a "28 days left" badge are also visible. The page content features a table with two rows of requirements. To the right of the table, a "Share" button is highlighted with a red box. Below the table, a "Share page" dialog is open, showing options to share in Slack, copy a link, or create a public link.

Requirement ID	Title	Description	Priority	Stakeholders	Functional Requirements
BR001	Inventory management system	Implement an automated inventory management system to track stock levels	High	Store manager, Warehouse team	Track stock levels, automate reordering, send low stock alerts
BR002	Point of sale (POS) system	Implement a modern POS system to process transactions and support payments	High	Store manager, Cashiers	Support multiple payment methods, integrate with inventory

Step 8: Version control and review

- Confluence automatically tracks version history for pages, so each time you edit a document, a new version is created.
- Open the document/page. Click on the **three dots** at the top-right corner of the page. Select **Page History** from the dropdown menu.

Summary

In this lab, you learned to effectively document business requirements using various digital tools in a retail environment. First, you refreshed your understanding of the business requirements document (BRD) and its significance in outlining project objectives. Next, you created a BRD using Microsoft Word, Jira, and Confluence, capturing the necessary requirements for key systems. Finally, you gained hands-on experience in using these tools to enhance your documentation skills, facilitating better communication and collaboration among stakeholders to drive successful project outcomes.
